ADDITION DASH

Materials: 0-9 spinner   paperclip calculator
          pencil           paper

Directions:
• Spin the spinner two times to make a two-digit number.
  (If you roll a 5, and 6, you can make 56, or 65. It’s up to
  you!)

• Write the number on a piece of paper so that both players
  can see it. This is your target number.

• Each player spins the spinner once to get the one-digit
  number he or she will use as a constant.

• Both players push “clear” on their calculators and enter “+”
  and his or her constant number. Together they count
  down “3...2...1...Go!”

• Each player hits the equal sign (=) repeatedly and counts
  the number of “hits” it takes to get to or past the target
  number. The first there (with the least number of hits) is
  the winner and scores a point for that round.

• Repeat the steps to play 4 more rounds. The grand winner
  is the person with the most points after five rounds.

Variations: Change the number of digits in the target.
Use multiplication instead of addition.
